

Description

The machine is used for measuring, coiling and cutting of the optical cables of different diameters, in lengths from 0.5 to 50 meters. Cables are wound-up on the twine head and cut off then. Operating modes are controlled by PLC with graphic touch screen. The machine is equipped with castor wheels and brake.

Features:

- Stable framework
- Built in source of compressed air
- No need to adjust winding-up of the cables with diameters of 1-7 mm
- The possibility of defined length cutting without coiling
- Protective safety elements
- Automatic rotation speed control
- Automatic cutting of the cable

Basic Specification

Length: 1100 mm
Width: 670 mm
Height: 1650 mm
Weight: 190 kg
