**DISTRIBUTION CABINET FOR  
A DRUM OF 60 LITRES IN VOLUME**

**STROZA**

create to innovate

The equipment is used as a supply and distribution unit of chemicals for technologies in manufacture of semiconductors. A chemically resistant cabinet makes it possible to store a drum of 60 litres in volume with a stock of chemical, from where the chemical can be pumped through individual outlets to the selected collection points. The drum is closed by means of a lid with built-in ultrasonic level measurement and with inertization by means of N<sub>2</sub> nitrogen to prevent contamination of the chemical by the surrounding environment.

## HIGHLIGHTS

- › The cabinet made of chemically resistant PVC which meets the standard FM4910
- › Inside, there is a drum of 60 litres in volume as a storage tank of a chemical
- › Measurement of the level height in the drum by means of an ultrasonic sensor
- › A pneumatically operated membrane pump
- › Up to 4 separately switched in outlets with the chemical
- › Unitronics control system with a touch screen
- › Compact cabinet dimensions: 640 × 600 × 1880 mm
